

Document Addressing Changes to the NSBE Website

1. Fix the Size of Text

Change Made: The text sizes on various pages, including the timeline and competition pages, were adjusted to ensure readability and consistency across devices. Using relative units (like `rem`) instead of fixed units (like `px`) for fonts was implemented.

Reason for Change: Feedback indicated that some text appeared too large or too small, especially when viewed on different screen sizes. By adjusting the text size using `rem` units, we ensured that the text scales properly with the user's browser settings, improving readability and accessibility.

Improvement: This change made the text more visually appealing, consistent, and easier to read on both desktop and mobile devices, ensuring a better user experience for all visitors.

2. Resize Images on Timeline Page

Change Made: The images on the timeline page were resized to fit within the container without overwhelming the text or layout. We set a maximum width for images and ensured they scale responsively based on screen size.

Reason for Change: Originally, the images were too large, causing them to dominate the page and making the layout feel unbalanced. By reducing the image size and adding spacing between the timeline items, we ensured a more harmonious design that allows both text and images to complement each other.

Improvement: The resized images provided a better visual balance and enhanced the overall look of the timeline, making it more professional and visually structured. Additionally, the layout now feels more responsive and readable across all screen sizes.

3. Add Additional Images to Competitions Page

Change Made: Additional images were added to the competitions page, each resized and styled to ensure a consistent layout across the site.

Reason for Change: The competitions page lacked visual engagement, with limited imagery to break up the text. Adding more images provided a richer visual experience and helped better illustrate the events featured on the page.

Improvement: By incorporating additional images, we enriched the content on the competitions page, making it more engaging and visually diverse. This also helped with storytelling and made the page more attractive to users.

4. Add Logo to Mobile View

Change Made: The NSBE logo was added to the mobile view to ensure branding consistency across devices.

Reason for Change: The logo was previously missing in the mobile view, which weakened the brand identity on smaller screens. Adding the logo to mobile improved the website's brand presence and ensured that users could always identify the organization, regardless of device.

Improvement: The addition of the logo made the website feel more cohesive across different screen sizes and ensured that users could easily recognize the organization, improving brand awareness and professionalism.

5. Add Social Media Icons to Mobile View

Change Made: Social media icons were added to the mobile header, ensuring that users could access the NSBE's social platforms from any device.

Reason for Change: Social media engagement is critical for modern websites, and previously, the social media icons were missing from the mobile view. This omission could have limited user interaction and engagement with NSBE on social platforms.

Improvement: By adding the social media icons to mobile, we ensured that users can easily follow and engage with NSBE's social media accounts. This improves connectivity with the audience and encourages further engagement with the organization on external platforms.

Overall Website Improvement

By making these changes, the website now feels more balanced, engaging, and professional. Text and image sizes are optimized for readability and visual appeal across all devices. The addition of the logo and social media icons in the mobile view ensures consistency in branding and functionality. The site is now more user-friendly, accessible, and visually cohesive, improving the overall experience for visitors.
